

2.8. Tree Supply

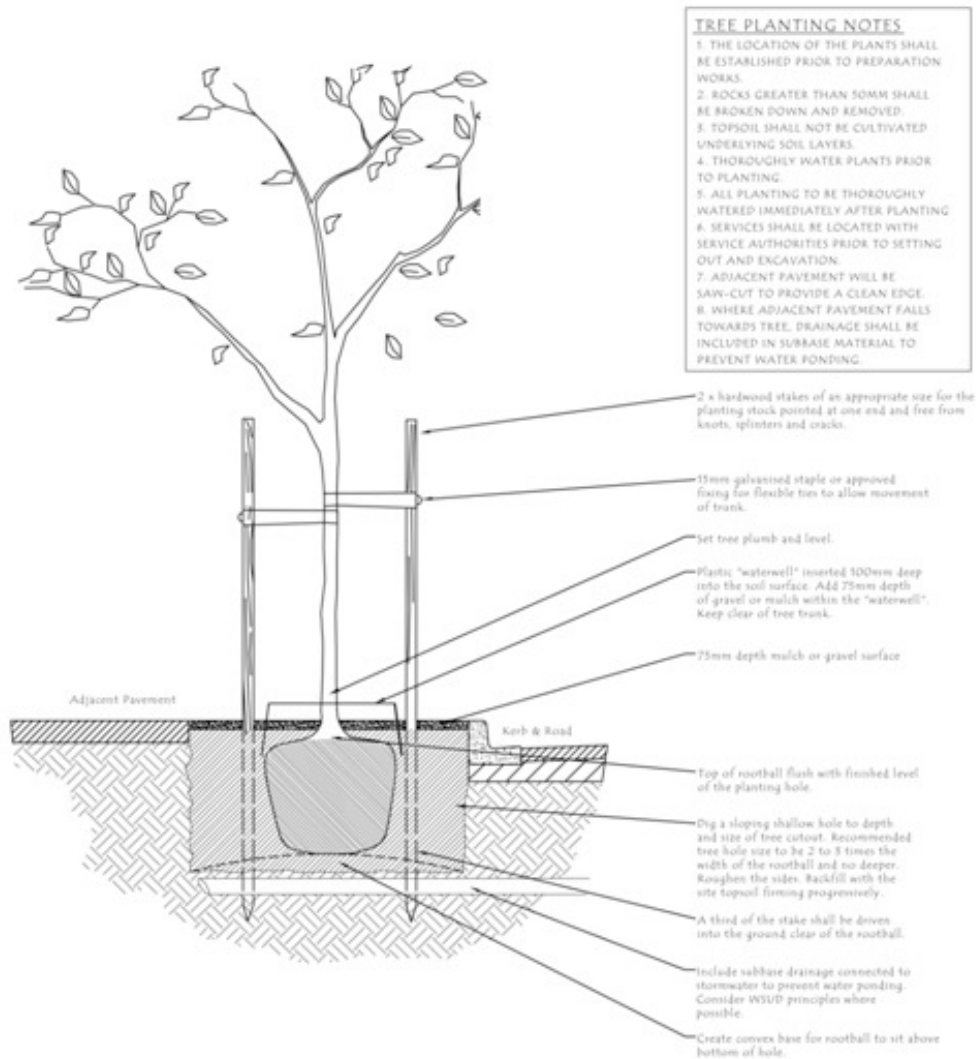

Sourcing high quality stock is an important aspect of establishing a healthy, street tree population that will provide long term benefits to Moreland. Using the outcomes of the street tree inventory to develop a short to medium term planting plan is recommended. A planting plan will enable trees to be pre-ordered and regularly inspected at the nursery to ensure they meet the specification of a good quality tree (Clarke 2003).

Trees at planting should be at least one metre in height and the rootball must provide enough ballast to support the tree (Clarke 2003).

2.9. Tree Planting Details

2.10. Tree Establishment Maintenance Plan

An example of a two year tree establishment maintenance plan is shown in Table 6.

Table 6. A two year establishment maintenance plan for street tree plantings

Activity	Number of visits (Year 1)	Number of visits (Year 2)
Watering	30	20
Weed control	2	1
Mulch top up	2	1
Formative pruning	-	1
Stake removal	-	1
Water well removal	-	1
Tree tie removal	-	1
